

ULTRAFLO® Breeder Feeder

The Breeder Feeder that Speeds the Feed to Your Birds

Let's grow together.

Fast Feed Delivery and Top Conversion

- The ULTRAFLO® Auger delivers feed fast – 100 feet (30.5 meters) per minute.
- Fast feed delivery speed means no birds can eat until all birds can eat, eliminating competition, stress and picking over of feed.
- Auger flightings act as a grid to prevent raking and wasting feed.
- Trough shape provides a natural “feed catch zone” for even greater feed savings.
- Feed savings and low horsepower requirements result in lower overall operating costs.

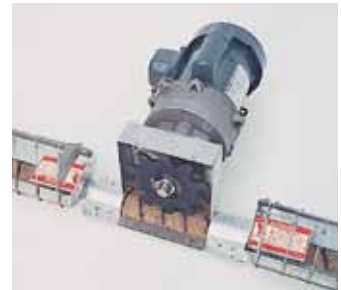

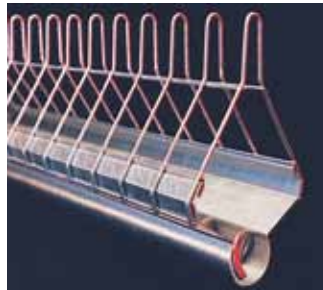

Uniform Ration and Easy Operation

- The rotating action of the ULTRAFLO® Feeder's auger stirs feed to maintain an absolute mix of feed components for a direct “bin-to-bird” feed ration.
- A variety of grill spacings is available to prevent males from eating the hen's ration. Using a separate rooster feeder keeps males in better condition and fertility high.

Chore-Time's ULTRAFLO® Breeder Feeding System quickly and reliably delivers uniform feed to every breeder hen. Each bird gets its share of the ration for better uniformity.

- System is easy to program and operate, and, since there are no corner units or links to cause breakdowns, the ULTRAFLO System requires virtually no maintenance.
