

revolution®

Attractive and easy.
Poults love it.

CHORE-TIME®

The delicious sight of falling feed tells poults,
“It’s time to eat!”

Want to get poults’ attention? Show them a cascade of feed, falling from high up on the feeder. Once you have their attention, give them easy access to a big flood of feed.

That’s the concept behind Chore-Time’s REVOLUTION® Poult Feeder.

Conventional poult feeders use flood windows for filling a feeder pan to capacity. However, the filling action is hardly visible to the poults and does little to attract them to the pan. Also, most poult feeders can only flood the pan while it sits on the floor.

The Rotary Gate floods feeders on the floor... or in the air.

The heart of the REVOLUTION® Poult Feeder is innovative technology we call the Rotary Gate.

PATENTED
ADDITIONAL PATENTS
PENDING

The Rotary Gate is a simple mechanism based on two cones: one inside and one outside. The outside cone position stays fixed. The inside cone rotates to open and close the pairs of openings on the Rotary Gate. Flood level can be adjusted up or down, even when the feeder is raised off the floor.

The Rotary Gate's openings are located high on the feeder. Unlike conventional feeders, it is easy for poults to see the stream of feed flowing out of the gate. That sight of flowing feed naturally attracts poults to the feeder.

Easy eating.

One of the most obvious features of Chore-Time's REVOLUTION® Poult Feeder is the scalloped rim. The curvaceous shape makes it comfortable for poults to reach over to get to the feed. What's more, the unique design of the sculpted rim creates an effective barrier to feed waste, keeping feed in the pan even while completely flooded. As a result, the pan is both deep and shallow, so even new poults can reach an abundant amount of feed easily from the outside of the feeder.

More poults live, growing to uniform size.

When all poults have easy access to feed, there is far less incentive for them to climb up into the pan. As a result, traffic in REVOLUTION® Poult Feeder Pans can be significantly lower than conventional designs. Even the smallest poults have more opportunities to eat as much feed as they want, giving them a better chance to bulk up to target weight. Plus, Chore-Time's REVOLUTION® Poult Feeder can be flooded any time you like, even when it is off of the ground. So, every bird in the house has easy access to an abundant supply of cleaner feed.

One handle control.

The Rotary Gate can be controlled on dozens of feeders by the handle on one ACCU-CLICK™ Actuator. Chore-Time's ACCU-CLICK™ Manual Feed Gate Actuator uses a simple rack and pinion mechanism and handle to adjust the Feed Gate opening on groups of feeders, with 10 possible steps of change. The system is simple, maintenance-free, and ready for upgrade to the ACCUTROL® Automatic Actuator.

The REVOLUTION® Poult Feeder system:

- Retrofit capability, works on most brands of auger tubes
- Repair Top, change out damaged feeders with a common hacksaw in minutes
- Reliable Chore-Time SENSOR PLUS™ Electronic Control Pan, in both End and Intermediate models
- Legendary Chore-Time quality – Made to Work. Built to Last.®
